# Details on the G2RV

## Wiring

The G2RV also provides flexibility for wiring. The Bases in this new Relay Series are available with screw terminals or push-in terminals for wire connection.

Choose the best connection method for the application.

## Terminal Block-type Module

With a width of only 6.1 mm, the G2RV meets essentially any FA application, particularly switching and expansion of equipment and machinery. The G2RV is easily installed even under strict space limitations.

## Stoppers and Levers

Easy-to-use stoppers and levers securely hold the Relays to the Base. They also enable easily removing the Relays from the sockets. The stoppers and levers are also equipped with grooves to attach markers, which can be used to easily identify circuits.

## Crossbars

P2RV Crossbars come in many variations for the number of poles and edge colors. They can be plugged into any of a total of four slots for I/O according to the application.

# Slim Relay G2RV

## The World's First Industrial Slim Relay

- Large plug-in terminals for easy connection.
- LED indicator and mechanical flag to check operation.
- Transparent housing enables checking relay condition.
- Slim outline to save space.
- Push-in terminals and accessories for easy wiring.

# Installation

## ■ Tools

A flat-blade screwdriver should be used to mount the cables for G2RV-SL-500-series Relays when using standard wire without ferrules.

### Applicable Screwdriver

- Flat-blade, Parallel-tip, 2.5 mm diameter (3.0 mm max.)

- Flat-blade, Parallel-tip

- Flat-blade, Flared-tip

Examples: FACOM      AEF.2.5×75E      (AEF. 3×75E)  
 VESSEL      No. 9900-(-)2.5×75      (No. 9900-(-)3×100)  
 WIHA      260/2.5×40      (260/3×50)  
 WEIDMULLER      SD 0.4×2.5×7.5      (SD 0.5×3.0×80)

\*Chamfering the tip of the driver improves insertion when used as an exclusive tool.

## ■ Applicable Wires

### Applicable Wire Sizes

#### G2RV-SL700 Series

Property	Requirements
Cross-section with clamping yoke technology	0.5 to 2.5 mm <sup>2</sup> : stranded/solid (without ferrules)
	0.5 to 2.5 mm <sup>2</sup> : stranded wires with ferrules with plastic collar
	0.5 to 2.5 mm <sup>2</sup> : stranded wires with ferrules without plastic collar
	4 mm <sup>2</sup> : Solid
	Stripping length: 7 mm

#### G2RV-SL500 Series

Property	Requirements
Cross-section with push-in technology	0.5 to 2.5 mm <sup>2</sup> : stranded/solid (without ferrules)
	0.5 to 1.5 mm <sup>2</sup> : stranded wires with ferrules with plastic collar
	0.5 to 2.5 mm <sup>2</sup> : stranded wires with ferrules without plastic collar
	4 mm <sup>2</sup> : Solid
	Stripping length: 12 mm

Use wires of the applicable sizes specified in the above table. The length of the exposed conductor should be 7 mm for a G2RV-SL700 series Relay, 12 mm for a G2RV-SL500 series Relay.

# Wiring Procedure for G2RV-SL500 Series

## Wiring (for Stranded Wires with Ferrules or Solid Wire)

Insert the exposed conductor into the connection hole.

No other tools are required.

Use the above procedure for stranded wires without ferrules, but add the following step to the beginning of the procedure.

## Remove

Insert the specified screwdriver into the release hole.

Remove wire.

Remove screwdriver.

**Note:** Remove the screwdriver all the way.

# Precautions

## Precautions for Connection

- Do not move the screwdriver up, down, or from side to side while it is inserted in the hole. Doing so may cause damage to internal components (e.g., deformation of the clamp spring or cracks in the housing) or cause deterioration of insulation.
- Do not insert the screwdriver at an angle. Doing so may break the side of socket and result in a short-circuit.

- Do not insert two or more wires in the hole. Wires may come in contact with the spring causing a temperature rise or be subject to sparks.

- Insert the screwdriver along the hole wall as shown below.

- If lubricating liquid, such as oil, is present on the tip of screwdriver, the screwdriver may fall out resulting in injury to the operator.
- Insert the screwdriver into the bottom of the hole. It may not be possible to connect cables properly if the screwdriver is inserted incorrectly.

## General Precautions

- Do not use the product if it has been dropped on the ground. Dropping the product may adversely affect performance.
- Confirm that the socket is securely attached to the mounting track before wiring. If the socket is mounted insecurely it may fall and injure the operator.
- Ensure that the socket is not charged during wiring and maintenance. Not doing so may result in electric shock.
- Do not pour water or cleansing agents on the product. Doing so may result in electric shock.
- Do not use the socket in locations subject to solvents or alkaline chemicals.
- Do not use the socket in locations subject to ultraviolet light (e.g., direct sunlight). Doing so may result in markings fading, rust, corrosion, or resin deterioration.
- Do not dispose of the product in fire.

## Removing from Mounting Rail

To remove the socket from the mounting rail, insert the tip of screwdriver in the fixture rail, and move it in the direction shown below.

**ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.**

To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.

Cat. No. J163-E1-01 In the interest of product improvement, specifications are subject to change without notice.
