# MK-S-series Relays with DCswitching Models That Can Switch 220 VDC, 10 A (Resistive Load).

- Switch a DC load of 220 VDC, 10 A (resistive load).
- Lineup includes models with SPST-NO and SPST-NO/ SPST-NC contact forms.
- Using a SPST-NO/SPST-NC contact form enables detecting contact welding. (When the NO contacts become welded, the NC contacts will maintain a minimum distance of 0.5 mm.)
- Models are also available with a built-in test button.
- Models for AC Loads can switch 250 VAC, 15 A (resistive
- · RoHS compliant.

Note: 1. The rated current and coil resistance are measured at a coil temperature of 23°C with tolerances of +15%/-20% for AC rated current and ±15% for DC coil resistance.

- 2. Performance characteristic data are measured at a coil temperature of 23  $^{\circ}\text{C}.$
- 3. The maximum allowable voltage is the maximum value of the allowable voltage range for the operating power supply for the relay coil. There is no continuous allowance.
- 4. The rated current is approximately 5 mA higher for Models with Built-in Operation Indicators (DC operating coils).

# **Safety Precautions**

Refer also to Precautions for All Relays.

#### **Precautions for Correct Use**

#### Installation

- Models for DC Loads (i.e., models with "X" in the model number)
  have permanent magnets built into the insulating block, so
  magnetic interference will occur and contact switching capacity will
  be decreased if a permanent magnet or other magnetic body
  comes near the Relay.
- Models for AC Loads do not have permanent magnets built in.

#### Wiring

- The contact terminals on Models for DC Loads (i.e., models with "X" in the model number) have polarity. Wiring with incorrect polarity may result in inability to turn OFF the Relay or loss of functionality.
- Wire models with built-in operation indicators with the correct coil polarity (DC operating coil).

#### **Test Button**

- Turn OFF the power supply before operating the test button.

  Always return the test button to the original position after you use it.
- Do not use the test button as a switch.
- The durability of the test button is 100 operations minimum.

#### **Operating Environment**

Do not use the Relay in environments with combustible gas. Doing so may result in explosion due to arcing.

#### **Storage**

Models for DC Loads (i.e., models with "X" in the model number) are magnetized because they have a built-in magnet to deflect and extinguish the arc. Do not install the Relay near IC cards or other items that may be adversely affected by magnetism.

#### **Usage**

Use the Relay mounted in the P7M-06P Socket.
